COMPILE THE MODEL

The screenshot shows a Jupyter Notebook interface within Visual Studio Code. The notebook is titled 'model.ipynb' and is located at 'C:\Users\Lenovo\Desktop> conversation engine > model.ipynb'. The current cell is an 'empty cell' containing a single line of Python code: `model.compile(loss='categorical_crossentropy', optimizer='adam', metrics=['accuracy'])`. The code is highlighted in a light blue background. The notebook is running on a 'Python' kernel. The status bar at the bottom indicates 'Jupyter Server: Local', 'Ln 1, Col 40', 'Spaces: 4', 'CRLF', 'Cell 21 of 21', 'Go Live', 'Prettier', and 'Run'.

```
model.compile(loss='categorical_crossentropy', optimizer='adam', metrics=['accuracy'])
```
